## Networking and Network Routing: An Introduction

Each packet is then labeled with both the destination and the source address, which is then routed through the Internet toward the destination. Since the IP delivery mechanism is assumed to be unreliable, any such packet can possibly get lost during transit, and thus would need to be retransmitted if the timer associated with this packet expires.

### Routing Protocols (RIP, OSPF, BGP)

what service the packet needs: eg throughput, delay, etc) Policy-dependent: a policy defines what paths should, or should not, be followed. The router uses a "routing table" to determine the path. Static vs Dynamic routing tables.
